Fiber Optic Test

Fiber optic components are sensitive to physical stress which can induce loss. One can see the effects of physical movement of fiber optic cables and connectors on fiber optic assemblies. A simple bend in singlemode fiber cable can induce several dB loss.

The FOA Reference For Fiber Optics - Measuring Power

In response to these challenges, EXFO developed a better way to test fiber optics: The iOLM is an OTDR-based application designed to simplify OTDR testing by eliminating the need to configure parameters, and/or analyze and interpret multiple complex OTDR traces.

A revolutionary approach to frontline fiber testing Optical Xplorer is more than an improvement on existing test tools—it takes a completely new approach to fiber installation, turn-up and repair.

EXFO launches new category of fiber testing solutions

OTDRs should not be used for measuring insertion loss in the fiber optic cable - that task is better left to a fiber optic test source and power meter. OTDRs simply show you where the cables are terminated and confirm the quality of the fibers, connections and splices.
