A manual transmission helps a vehicle achieve a desired speed through the use of gears, a clutch, and a shifter. It works like this: when the driver wants to shift gears, he or she pushes in the clutch pedal while letting off the gas. This disengages the clutch within the transmission, allowing the driver to shift

The simplest type of transmissions is the manual transmission. It's called "manual" because the driver has both roles of decision making (when to perform a gearshift) and actuation (actual gearshift process). The traction characteristics of an internal combustion engine makes it impossible to propel a vehicle without a transmission.
