The first unibody iMac was released in October of 2009, replacing the 20 and 24 inch versions of the second generation. Not to be confused with the 21.5" version, this iMac measures 27 inches across opposite corners and came with options for the Intel i-series chips not available initially in the smaller version. The plastic panel that made up the backs of the older generation is replaced with an aluminum enclosure which extends around the sides and front to form a single piece.
