- If any of your answers changed, explain why.
- Change any false statements into true statements.
- Use your revised statements as a study guide. 1 Every child is genetically related to one male and one female parent. 2 A female's reproductive system does not begin producing eggs until she reaches sexual maturity.

Chapter 13: The Human Reproductive System

The function of the male reproductive system (Figure 1) is to produce sperm and transfer them to the female reproductive tract. The paired testes are a crucial component in this process, as they produce both sperm and androgens, the hormones that support male reproductive physiology. In humans, the most important male androgen is testosterone.
