We define it as an electromagnetic wave between 300 MHz and 300 GHz, in agreement with Pozar's Microwave Engineering, which allows microwave engineers as broad a stake as possible in the EM spectrum. Below 300 MHz is called very high frequency (VHF , thanks, Chris!), above 300 GHz you are into the sub-millimeter-wave spectrum.

Understanding Microwaves and Microwave Devices

Microwaves are the principal carriers of high-speed data transmissions between stations on Earth and also between ground-based stations and satellites and space probes. A system of synchronous satellites about 36,000 km above Earth is used for international broadband of all kinds of communications—e.g., television and telephone.
